

Social Issue :-01

Problem Statement

The drying of this pond shows the growing problem of water scarcity and neglect of natural water resources. Lack of water affects nearby people, animals, farming, and the environment, creating difficulties in daily life and increasing the risk of future water shortages.

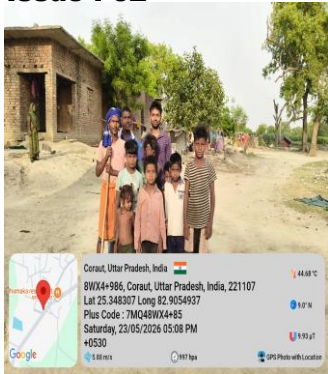

Technical Solution

This pond can be restored by using proper water conservation and management techniques. First, the pond should be cleaned regularly to remove waste, mud, and unwanted plants so rain water properly store ho sake. A rainwater harvesting system can also be connected nearby to increase the water level during rainy season. Proper drainage channels should be made so surrounding area ka rain water pond me aa sake instead of road par waste hone ke. Plantation around the pond can help in improving soil moisture aur environment condition bhi better hogi. Garbage aur dirty sewage water ko pond ke nearby dump karna strictly stop hona chahiye because it pollutes the water source and damages the ecosystem. Local authorities aur villagers ko milkar pond ki regular maintenance and monitoring karni chahiye. Awareness programs bhi chalane chahiye taki log future generations ke liye natural water resources ko save karne ka importance samajh sake.

Social Issue :-02

Problem Statement

People living in this area are facing poor hygiene and unhealthy surroundings due to garbage, dirty environment, and lack of proper sanitation facilities. Such conditions can lead to diseases, unsafe living conditions, and a lower quality of life for the community.

Technical Solution

This area need proper sanitation and waste management system to improve living condition of people. Garbage should be collected regularly and dustbins should be placed in proper locations so waste idhar udhar na pheka jaye. Clean water supply aur proper drainage system bhi hona chahiye to stop dirty water and diseases. Government aur local authorities ko regular cleaning and hygiene monitoring karna chahiye. Awareness programs bhi chalane chahiye taki log cleanliness aur healthy environment ka importance samajh sake. Plantation and proper road cleaning can also help in making the area more safe and healthy for the community.

Social Issue :-02

Problem Statement

This damaged road reflects poor infrastructure and lack of proper maintenance.

Broken and uneven roads create difficulties for daily travel, increase the risk of accidents, and affect transportation for local people. Such conditions also show the need for better public facilities and development in the area

Technical Solution

This damaged road need proper repair and maintenance to make transportation safe and smooth for local people. Strong road construction material should be used so road jaldi break na ho and water damage se bhi bache. Proper drainage system bhi hona chahiye taki rain water road par collect na ho.

Regular inspection and maintenance by local authorities is very important to prevent accidents and traffic problems. Road side safety signs aur street lights bhi lagaye jane chahiye for better safety during night time. Government ko infrastructure development par proper attention dena chahiye so people can travel safely without daily difficulties.

Social Issue :-04

Problem Statement

This area shows a dangerous road condition where a pond is located very close to the roadside without any safety barrier. It increases the risk of accidents for vehicles, cyclists, and pedestrians, especially at night or during rainy seasons. Lack of proper safety measures can put many lives in danger.

Technical Solution

This area needs proper safety management because the pond is very close to the running road. Strong safety barriers and side railing are needed so that vehicles and pedestrians do not accidentally fall into the pond. Roadside warning signs and reflectors should also be installed, especially at night. Proper road widening and maintenance can also reduce the accident risk in this area. Garbage and unwanted waste should be removed from the pond and nearby area to keep the place clean and safe. Local authorities should conduct regular inspections and take proper action to prevent any serious accidents in the future.

Social Issue :-05

Problem Statement

Garbage dumped beside the road creates an unhealthy and polluted environment. It can spread diseases, produce bad smells, and affect the cleanliness of the area. Such improper waste disposal also creates problems for pedestrians and reflects poor waste management in the community.

Technical Solution

This area needs proper waste management system to stop garbage dumping beside the road. Large dustbins should be installed at proper places so people easily waste dispose for sake instead of road side dumping. Regular garbage collection by municipal authorities is also important to keep the area clean and hygienic. Awareness programs should be organized taking local people cleanliness and hygiene's importance into account. CCTV cameras and warning boards can also be used to stop illegal garbage dumping. Plantation and regular road cleaning can also help in improving environment condition and making the area more healthy for public use.

Social Issue :-06

Problem Statement

Water has remained stagnant on this road for many days due to the lack of a proper drainage and sewage system. This creates unhygienic conditions, spreads mosquitoes and diseases, and causes difficulties for people while walking or traveling through the area.

Technical Solution

This problem can be solved by making proper drainage and sewage system in the area. Water should flow through underground drains so road par water long time tak collect na ho. Regular cleaning of drainage lines is also important to stop blockage and dirty water overflow.

Municipal authorities ko time to time inspection and maintenance karna chahiye so stagnant water problem jaldi solve ho sake. Anti-mosquito spraying and sanitation activities bhi regularly honi chahiye to reduce diseases. Road level improvement aur proper water outlet system can also help in making the area clean, safe, and hygienic for local people.

Social Issue :-07

Problem Statement

This irrigation tubewell has not been working for many years, causing serious problems for farmers who depend on it for watering their fields. Due to lack of maintenance and government action, agricultural activities and crop production are being affected in the village.

Technical Solution

This irrigation tubewell need proper repair and maintenance so farmers can again use it for watering their fields. Old machines, pipes aur electrical connections should be checked and replaced if damaged. Regular servicing is also important so tubewell long time tak properly work kar sake.

Government aur local authorities ko is problem par quick action lena chahiye because many farmers depend on this water source for agriculture. Solar powered water pumping system bhi use kiya ja sakta hai to reduce electricity problem and improve irrigation facilities. Proper monitoring and maintenance can help in increasing crop production aur farmers ko water shortage problem se relief mil sakta hai.

Social Issue :-08

Problem Statement

Garbage dumped beside a religious place creates an unhygienic and disrespectful environment. Improper waste disposal near public and community areas can spread pollution, bad smell, and diseases, while also affecting the cleanliness and dignity of the surroundings.

Technical Solution

This problem can be solved by proper waste management and regular cleaning near the religious place. Garbage should not be dumped beside mosque because it creates dirty environment aur public health problems bhi badhta hai. Large dustbins should be installed in proper locations so people easily waste dispose kar sake.

Municipal authorities ko regular garbage collection and cleaning karni chahiye to keep the surrounding clean and hygienic. Awareness programs bhi chalane chahiye taki local people cleanliness aur respect for public places ka importance samajh sake. CCTV cameras and warning boards can also help in stopping illegal garbage dumping in the area.

Social Issue :-09

Problem Statement

The well in our locality has dried up due to lack of water conservation, groundwater depletion, and poor maintenance. This has reduced the availability of clean water for local residents and reflects the growing issue of water scarcity in urban and rural areas.

Technical Solution

This dry well can be restored by using proper water conservation and maintenance techniques. Sabse pehle, the well should be cleaned properly because inside there is dry waste, plants and mitti collected over time. Cleaning se water storage capacity improve hogi.

A rainwater harvesting system can also be connected nearby so that rainy season ka water directly well me recharge ho sake. Isse groundwater level increase hoga aur future me well fir se useful ban sakta hai.

For safety, a strong cover and iron grill should be installed because open well dangerous bhi ho sakta hai for children and animals. Nearby residents ko bhi aware karna chahiye ki they should not throw garbage inside the well.

Regular checking and maintenance by local authorities and local people together can help restore the well. Yeh solution water scarcity problem ko reduce karega and locality me clean water availability improve hogi.

Social Issue :-10

Problem Statement

The handpump in our locality has remained non-functional for a long time due to poor maintenance and lack of repair facilities. This has created difficulties for residents in accessing clean drinking water and highlights the social issue of inadequate public water infrastructure.

Technical Solution

This handpump can be repaired and made functional again with proper maintenance and technical support. Sabse pehle, the damaged parts like handle, pipe or washer should be checked and replaced if needed. Long time se use na hone ki wajah se internal parts jam bhi ho sakte hain, so proper servicing is important. The surrounding area should also be cleaned because dirty surroundings can affect water quality. Groundwater level nearby should be checked, and if water level is low then rainwater harvesting techniques can help in recharging underground water. Regular inspection by local authorities and village/community members is also necessary so that small problems can be fixed on time. Isse handpump fir se usable ban sakta hai and local people ko clean drinking water easily available ho payega.
